Re: Tega Cay Deer Data

Deer collection activities were conducted on Tega Cay over two phases. Phase one (SCDNR Permit# 092324-01) occurred during the evenings of December 15/16, 16/17, 17/18 and 18/19, 2024 while phase two (SCDNR Permit # 092324-01 Amended) occurred during the evenings of February 21/22, 22/23, 23/24 and 24/25, 2025.

Eighty deer were collected during each phase for a total of 160 deer. Please see the deer collection data below, including date, collection quadrant, SCDNR tag number and age class. For age class AD is an adult doe, AB is an adult buck and ASA is an antlerless subadult.

Below the deer collection data is a summary of deer age class by collection quadrant for phase one (SCDNR Permit# 092324-01) and phase two (SCDNR Permit # 092324-01 Amended). During phase one adult does comprised the highest percentage of the harvest when compared to antlerless subadults and adult bucks. For phase two antlerless subadults comprised the highest percentage.

The third deer age class by collection quadrant combines both phases (SCDNR Permit# 092324-01 Combined). As you can see from the chart, quadrants one and four had fewer deer removed when compared to quadrants two and three. The total number of adult does collected equaled the number of antlerless subadults. Adult bucks were 20% of the harvest.

The last page is a map depicting the boundaries of each quadrant.
